

# How to build a Hedgehog house

## You will need:

- Hand Drill
- 38mm Galvanised Screws
- Hand Saw / Circular Saw
- 3mm Drill Bit
- Countersink Bit
- Screwdriver

## Step 1

Measure, mark, and cut the wood according to the following dimensions (measurements are in mm):

## Step 2

Drill and countersink the top of the 'tunnel' to the sides, then secure with galvanised screws.

## Step 3

Drill and countersink the 'tunnel' to front of 'house' and secure with screws.

## Step 4

Fix the sides to the front in the same manner.

## Step 5

Secure the back between the side panels with screws.

## Step 6

Countersink and drill the roof panels to the sides.

## Step 7

Sand any harsh edges with sandpaper. The roof can also be felted as a finishing touch, but this is optional.
